

① Qn No: 1

Given

input variables ; $(x_1, x_2, x_3, x_4) = (0.7, 1.2, 1.1, 2)$

weight ; $(w_1, w_2, w_3, w_4, w_5, w_6) = (-1.7, 0.1, -0.6, -1.8, -0.2, 0.5)$

Loss L_2 , $L(y, \hat{y}) = \|\hat{y} - y\|^2$

$\frac{\partial L}{\partial \hat{y}} = 2 \|\hat{y} - y\|$

output $\hat{y} = 0.5$

Forward Variables

$$s_1 = x_1 w_1 + x_2 w_2$$

$$= (0.7)(-1.7) + (1.2)(0.1)$$

$$= -1.19 + 0.12$$

$s_1 = -1.07 \rightarrow ①$

$$s_2 = x_3 w_3 + x_4 w_4$$

$$= (1.1)(-0.6) + (-1.8)(2)$$

$s_2 = -4.26 \rightarrow ②$

W.K.T, Transfer function $h_1 = \frac{1}{1 + e^{-x_1 \omega_1 + x_2 \omega_2}}$

$$h_1 = \frac{1}{1 + e^{(s_1)}}$$

$$= \frac{1}{1 + e^{(-1.07)}} \quad (\text{from ①})$$

$$\boxed{h_1 = 0.2554} \rightarrow \text{③}$$

Similarly

$$h_2 = \frac{1}{1 + e^{-(s_2)}}$$

$$= \frac{1}{1 + e^{-(-4.26)}} \quad (\text{from ②})$$

$$\boxed{h_2 = 0.0139} \rightarrow \text{④}$$

$$s_3 = h_1 \omega_5 + h_2 \omega_6$$

$$= (0.2554)(-0.2) + (0.0139)(0.5)$$

$$\boxed{s_3 = -0.04413} \rightarrow \text{⑤}$$

output $\hat{y} = \frac{1}{1 + e^{-s_3}}$

$$= \frac{1}{1 + e^{-(-0.04413)}}$$

$$\boxed{\hat{y} = 0.4889} \rightarrow \text{⑥}$$

Using Backpropagation, find loss:-

$$\frac{\partial L}{\partial \omega_1} = \frac{\partial L}{\partial \hat{y}} \times \frac{\partial \hat{y}}{\partial s_3} \times \frac{\partial s_3}{\partial h_1} \times \frac{\partial h_1}{\partial s_1} \times \frac{\partial s_1}{\partial \omega_1} \rightarrow \text{⑦}$$

given $\frac{\partial L}{\partial \hat{y}} = 2 \|\hat{y} - y\|$

$$= 2 \|0.4889 - 0.5\|$$

$$= 2 \times 0.0111 \Rightarrow 0.0222 \rightarrow \text{⑧}$$

$$\frac{\partial y}{\partial s_2} = y(1-y)$$

$$= 0.4889(1-0.4889) \quad (\text{from } \textcircled{6})$$

$$= 0.2498 \rightarrow \textcircled{9}$$

$$\frac{\partial s_2}{\partial h_1} = \omega_5 \Rightarrow -0.2 \rightarrow \textcircled{10}$$

$$\frac{\partial h_1}{\partial s_1} = (h_1)(1-h_1)$$

$$= (0.2554)(1-0.2554)$$

$$= 0.1901 \rightarrow \textcircled{11}$$

$$\frac{\partial s_1}{\partial \omega_1} = \pi_1 \Rightarrow 0.7 \rightarrow \textcircled{12}$$

Put values $\textcircled{8}, \textcircled{9}, \textcircled{10}, \textcircled{11}, \textcircled{12}$ in $\textcircled{7}$

$$\therefore \frac{\partial L}{\partial \omega_1} = (0.0222)(0.2498)(-0.2)(0.1901)(0.7)$$

$$\boxed{\frac{\partial L}{\partial \omega_1} = -0.00014}$$
